## New Removable Built-in Probe for the PosiTector 6000

### **New Feature**

■ Fully interchangeable probes - all probes can be detached and replaced with any one of our wide variety of probes including built-in, separate and microprobes

### **New Ordering Option**

■ The addition of the new removable built-in probes allow you to purchase bodies and probes separately.

### **Advantages of Removable Built-in Probes**

**Versatility** - Probes can be removed to allow the attachment of another probe for special applications such as for thick coatings, underwater use, or high precision microprobe measurement. Existing separate probe gages can attach a built-in probe for convenient one-handed measurement of large surface areas or while measuring on scaffolds or ladders where the other hand is used to grip the platform for safety.

**Ease of Repair** - If damaged, probes can be removed for service or replacement thus saving on shipping costs and reducing down time.

**Adaptable for Future Needs** - no need to replace your gage if your requirements change. Simply purchase a new probe.

*New! Removable Built-in*

*Probes available for a variety of applications*
